THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

DETAILED ACTION

1. This is in response to the appeal brief filed on 24 January 2008.
2. Claims 29, 31-41, 43-45 and 56-60 are pending in the application.
3. Claims 29, 31-41, 43-45 and 56-60 have been allowed.
4. Claims 1-28, 30, 42 and 46-55 have been cancelled.

Information Disclosure Statement

5. The examiner has considered the information disclosure statement (IDS) filed on 10/18/2007.

Allowable Subject Matter

6. Claims 29, 31-41, 43-45 and 56-60 are allowed.

The following is an examiner's statement of reasons for allowance:

The current application is directed towards a computer-implemented method is described for processing multimedia channels comprising: encrypting a first group of multimedia channels using a first type of encryption to produce a first group of encrypted multimedia channels; encrypting the first group of multimedia channels using a second type of encryption to produce a second group of encrypted multimedia channels; concurrently transmitting the first group of encrypted multimedia channels with the second group of multimedia channels to a plurality of multimedia subscribers having multimedia receivers capable of decrypting the first group of encrypted multimedia channels and/or the second group of multimedia channels. Also described is a method comprising: receiving a plurality of channels from content providers at a cable headend; simulcasting premium cable channels to a plurality of subscribers in both a first encrypted format and a second encrypted format; and transmitting non-premium channels to the plurality of subscribers in a non-encrypted format.

The closest prior art to the current application was Richards U.S. Patent No. 6,690,795 B1. Richards is directed towards an encryption system for restricted-access television systems. Multiple decryption keys are used to decrypt encrypted material which is transmitted to customers of a restricted-access television system.

However, Richards differs from the current application in several aspects. First Richards does not teach or suggest encrypting the same multimedia channels multiple times. Rather, program A is encrypted using one key (SK_A) and program B is encrypted using another key (SK_B). This is completely different than encrypting, for example, program A using two different types of encryption. Second, Richards does not teach or suggest encrypting the same channel using different types of encryption. Rather, as illustrated above, Richards teaches encrypting different programs using different keys. As a person of ordinary skill in the art will recognize, using two different types of encryption algorithm types is very different than using two different keys for the same algorithm. An encryption algorithm typically transforms data based on a code referred to as a key. Thus, a single type of encryption may be used with a large number of potential codes (keys) to encrypt/decrypt data. While Richards teaches using different keys for different programs, Richards is silent as to using two different types of encryption for the same group of multimedia channels. Third, Richards does not teach or suggest simulcasting two different versions of the same group of multimedia channels. Richards teaches broadcasting two different programs (Program A and Program B) encrypted using different keys, not two different versions of the same program encrypted using different encryption algorithms. Richards teaches transmitting multiple versions of a Control Channel Key (CCK) that is encrypted using different Channel Access Keys (CAK) during a transition period. See, col. 16,

Art Unit: 2131

line 65 to col. 17, line 18 (indicating that the CCK keys are encrypted according to both an "old" CAK key and a "new" CAK key during the transition period). However, again, Richards provides no indication that the CCK keys are encrypted using different types of encryption algorithms (only different CAK keys). Further, Richards is completely silent with regard to encrypting the same channel or group of channels multiple times using different types of encryption.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
